**33rd RABID ANIMAL DISCOVERED RABIES ALERT CONTINUES**

**Delray Beach, FL**—A raccoon attacked by a dog Friday, October 24 near SW 10<sup>th</sup> Avenue was confirmed positive for rabies today bringing the total rabid animal cases this year to 33. There was no human exposure in this incident and the dog's shots are current. The rabies alert area includes all coastal regions with an eastern boundary of the Atlantic Ocean, and a western boundary along US 441 from Boca Raton to Lantana and west again to Flying Cow Road where the line goes north to Martin County. Animal Care and Control will distribute literature warning of the rabies hazard in the immediate area surrounding the golf course.

The alert is the result of 33 rabid animal confirmations, mostly raccoons, this year. This latest incident represents the largest number of animal rabies since 1953. A total of 14 persons have come in contact with these animals and have had to take a series of rabies shots as a precaution.

Animal Care and Control can be reached at 561-233-1200 if abnormal raccoon or fox behavior is observed. If a person is bitten they should report to the nearest hospital for treatment and call the Palm Beach County Health Department at 561-840-4500.

Rabies is a deadly viral disease that can be prevented but not cured. The virus attacks the nerves and brain tissue of warm-blooded animals including people.

Domestic animals, dogs and cats, over four months of age are required to be vaccinated against rabies and wear a current rabies license tag. Rabies shots are also available through a veterinarian or by calling Animal Care and Control at 561 233-1272.
